

BANDAGE FOR WOUND OR INCISION CLOSURE

Abstract of the Disclosure

Disclosed is a bandage for closing a wound or incision, and methods for the use of same. The bandage comprises a
5 first flat flexible component having adhesive on a lower surface and a plurality of first elongated connectors extending from one edge thereof in a first direction. The bandage further comprises a second flat flexible component having adhesive on a lower surface and one or more second
10 elongated connectors extending from one edge thereof in a second direction generally opposite to the first direction. Pulling elements are joined to the first and second elongated connectors. Means are provided for attaching the first elongated connectors to the second flat flexible
15 component and the second elongated connectors to the first flat flexible component.
